

# Pipe Bund

Product Code: BH-A028

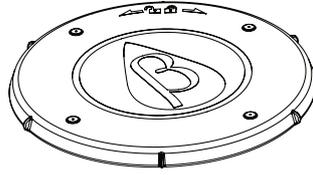

**BARNEY BUND**  
MORE THAN A BARRIER

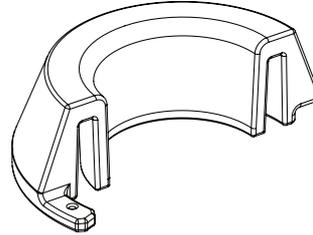

## Parts included in the kit:

8mm x 100mm  
Hexagon Flange Head - BZP  
(x4)

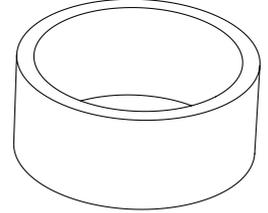

LS 5.5 x 25 G16  
Self-Drilling Fastener  
(x4)

Pipe Lid  
(x1)

Pipe Half  
(x2)

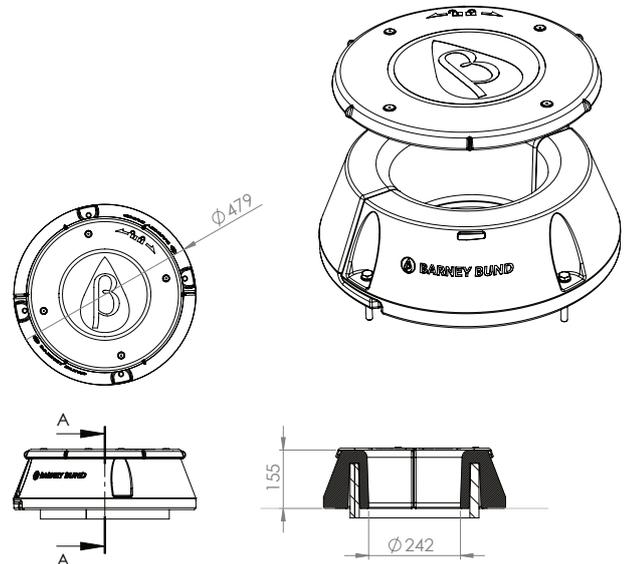

Foam  
(x1)

## Fitting:

Kit is supplied assembled.

1. Make sure floor is clear of debris.
2. Place kit over pipe-work or access hole.
3. Mark out the fixing points and drill pilot holes for the screw using 6mm drill bit.
4. Use appropriate hardware to bolt the kit to the floor.
5. Lid is removable for quick access.  
Simply twist to remove. It is advised to fix the lid in place where it is subject to adverse weather conditions. 4x guide points for fixing are located on the top of the lid.

## Tools required:

The kit is designed to be bolted to a hard floor with the 8mm x 100mm self-tapping fixings provided. To avoid damage do not overtighten.

## Notes:

- Foam will be approximately 20mm proud initially. This is designed to compress as the kit is bolted down. Ensure it is fully compressed and avoid any large cracks on the floor which could compromise the seal.
- Designed to cover holes of up to 250mm diameter.
- Make sure the foam is fully compressed after fitting.
- Make sure to remove any loose rubble from the area before fixing to the floor.
- Do not stand on the lid. (Safety rated to 100kg, with even weight distribution).
- Product is tested on concrete surfaces and only creates a seal from the surface up.
- It is advised to mark the holes prior to drilling, then remove the bund and then drill fixing holes.
- Drilling through the Bund may damage the product over time.
- When reusing, allow the foam seal to expand back to original size before using it again.
- After several uses the foam may need replacing.
- Working temperature range (Constant or daily cycle): -20°C / +100°C.
- Temporary solution (<24 months).
- Adhere to local health and safety regulations.
